Clinical Laboratory Directory of Laboratory Services

RAPID RESPONSE URINALYSIS CRITICAL VALUES

Listed below are the established critical limits for the Urinalysis area. Results exceeding these limits are flagged as critical in the Laboratory Information System (LIS) and must be called to the patient's caregiver or physician. Life-threatening critical levels will be called each time the result is obtained (analytes in bold print with asterisk).

*Reducing substances	Any positive results on a newborn < 7 days old.
